Notes to AIX Software Quick Reference Guide

Use this AIX Software Quick Reference Guide as your source of AIX Software product information. For more detailed information and complete specifications, please refer to HONE Announcement Letters, the HONE Configurator and the PC Configurator.

References in this guide to IBM products do not imply that IBM intends to make these available in all countries in which IBM operates.

This guide could contain technical inaccuracies or typographical errors. This guide should be used as a quick reference and not for proposals or bid quotes. All prices and performance numbers shown are for informational purposes only and are subject to change or correction without notice.

When using this guide, the product information is organized by machine type, model, and feature.

Software Charge Descriptions

BOTC	Basic One Time Charge
OTC	One Time Charge
ALC	Annual License Charge
MLC	Monthly License Charge
UPO	Upgrade Protection One Time Charge
UPA	Upgrade Protection Annual Charge
LPP	Licensed Program Product
PLA	Program License Agreement
DSLO	Distributed Systems License Charge (no media or docs shipped)

DSLO

Distributed Systems License Option orders are additional licenses which allow users with a basic license installed to use the same software on another processor. A DSLO license bills at a lower rate than the regular program charge. This option is not available on all programs. It can be ordered for customers who already have an initial software license of the same type. DSLO is only sold in quantity of one. Each DSLO is a separately licensed entity.

- * No materials, updates, or documentation will be shipped as part of a DSLO License.
- * DSLO feature codes cannot be added to the Basic License type/serial; a separate type/serial is required for each DSLO.
- * A DSLO license only establishes billing.
- * The customer is responsible for providing a copy of the software, documentation, service and updates to the site where the DSLO license is in use.
- * A DSLO License has no test period. Billing is effective immediately after installation.

Archived Products

It is sometimes necessary to order software products that have been withdrawn from marketing. Products that have been archived are listed in the HONE application SWINFO, application 3. Announcements of product withdrawals are not made via announcement letters.

See "Program Withdrawal from Marketing" in the General Information section of the Sales Manual for additional information.

NOTE: Product availability will be for two years from archived announcement effective date. Beyond two years, contact the product developer.

Ordering WITHDRAWN PRODUCTS in the ARCHIVE PRODUCT LIST

Archived product: To order an archived product, the Branch Office must contact SMS Software Manufacturing, Boulder, for product availability and then submit AEFORM "WITHDRAW" to Asset Management, Bethesda to open AAS for order entry. This applies to Initial and MES orders.

SMS SOFTWARE MANUFACTURING CONTACT - BOULDER

Alex Tongbua BLDSMA(TONGBUA)
T/L 263-3888 (1-303-939-3888)

Boulder Hours are from 7:00 am - 3:30 pm Mountain Time (Archived Products).

Include the following information:

- Customer name and number
- Program Type/Model
- Name / phone number / node of submitter
- Reason and/or type of request

WHAT PUBS SHIP WITH A SOFTWARE ORDER?

To determine what publications ship with a software order enter

- SWINFO at your HONE screen.
- Type in the software name in the keyword category.
- Enter the number associated with your software of choice from the listing.

USER DEFINITION FOR AIX

The definition of a 'user' for AIX/6000 continues to be a point of discussion. In an effort to clarify this definition, the criteria for a 'user' is as follows:

Within the scope of this license requirement, an AIX user is a terminal, remotely or locally attached, currently logged into AIX for entry of and display or printing of information.

Terminals logged into programs executing under the control of AIX are not considered AIX users under the terms of this license.

We count anything that goes through the username/password process - whether that is at a terminal, or remote (rlogin, telnet, etc). This means that if an Oracle application on one machine wants to access the data on another machine, and it uses a remote access method involving a ID/password (such as username==oracle) then it is using up a "user" slot because it is counted. If Oracle goes through another mechanism (such as directly via a TCP port) then it is not counted.

NFS accesses, remote printing Web accesses do not do get counted, but FTP and X11 remote accesses do (they both go through password authentication), in this model.

EXAMPLES:

Counted AIX User: IBM PS/2 logged into AIX via a LAN;
IBM Xstation logged into AIX

Non-Counted User: Terminal logged directly into an operating system or application executing under the control of AIX

If the logging-on device is not performing true interactive processing, concurrent log-ons do not count towards the number of users. If the terminals or devices are being managed by an application and do not perform a log-on to AIX, those terminals/devices will not be counted, assuming the application presents a single 'user' path to AIX.

Non-User: Printer attached to processor running AIX;
Time clock providing data input to an application;
Devices providing only input or only output
(These devices being classed with printers, time clocks, etc.)

A user or application that executes the following commands constitutes a 'user' license required:

- Any "r" command under TCP/IP (rlogin, rsh, rexec, rexecb, rexecd, rexec, rlogind, rcp)
- login
- telnet
- ftp
